

# DIFFERENT TYPES OF REPTILES

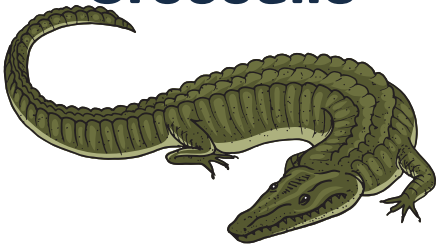

**Snake**

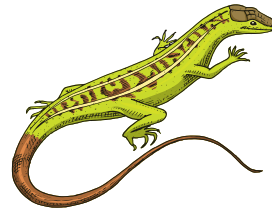

**Tortoise**

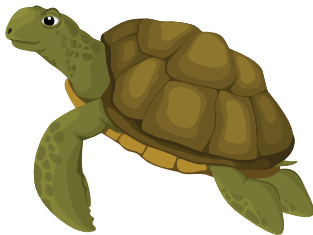

**Crocodile**

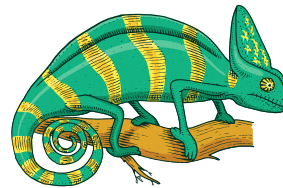

**Lizard**

**Turtle**

**Chameleon**

## Characteristics of Reptiles

Reptiles are cold-blooded and cannot regulate their own body temperature. They depend on the sun and shade to warm up or cool down.

All reptiles breathe using lungs, even aquatic reptiles like turtles and crocodiles.

Most reptiles lay eggs with leathery shells, however, some reptiles like certain snakes and lizards give birth to live young.
