NATURAL DISASTERS IN SOUTH AFRICA

VELD FIRES

Fast-moving fires that burn through dry grass and bushes, especially during windy seasons.

HEAT WAVES

Long periods of extremely hot weather that can be dangerous to animals, plants, and people.

FLOODS

Heavy rains that fill rivers and cover dry land with too much water.

TORNADOES

Spinning funnels of strong wind stretch from the clouds to the ground and destroy things in their path.

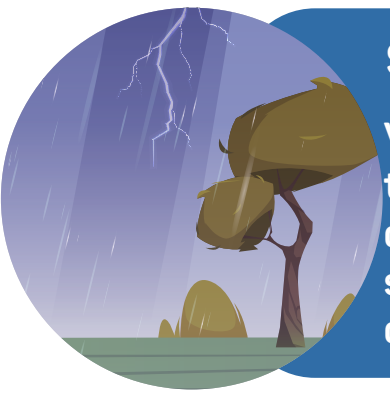

DROUGHTS

Long periods with little to no rain that leaves the ground dry and causes water shortages.

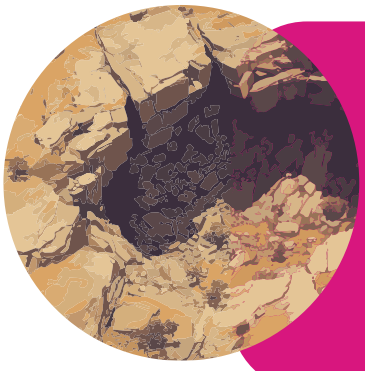

EARTHQUAKES

The ground shakes and trembles due to movement deep inside the Earth.

SEVERE STORMS

Violent thunderstorms bring dangerous lightning, strong winds, and destructive hail.

SINKHOLES

Large, dangerous holes open up in the ground when underground rocks dissolve or wash away.

LANDSLIDES

Mud and heavy rocks sliding quickly down a wet hill or mountain after heavy rains.
